Business Model Canvas

Key Partners

Firms we need
- Contract manufacturer for the cap (heating/cooling elements, pressure, battery, Bluetooth)
- Electronics / thermal engineer or parts supplier
- Headache doctors and neurologists
- Online retail (Amazon, our own site)

What they provide / do
- Manufacturing, parts, and safe heat/cooling limits and battery life
- Doctors: trust, referrals, and they read our share file
- Retail: reach, fulfillment, returns

What we give them
- Volume orders, a premium product to sell, and clear patient logs for doctors

How both benefit
- We get capabilities we lack; they get revenue, and doctors get better patient data

Key Activities

- Design and comfort-test the cap (padding, wear lying down)
- Build the app: one-tap logging, rule-based insights, doctor share file
- Safety, regulatory, and patent checks
- Customer research: pricing tests with adults 35+, app test
- Marketing to adults 35+ with frequent headaches

Must be good at
Safe, comfortable heat/cooling engineering; simple UX that gets people to log; problem-solving from user feedback

Key Resources

- Cap design and app (our IP)
- Engineering talent (hardware + app)
- Supplier and manufacturer relationships
- Survey and user-test data

Advantage in delivering the VP
- Brand as the premium, targeted relief option
- Each user's own log data: the app learns which settings help them, which a standalone tracker can't
- Doctor relationships for referrals

Jobs-To-Be-Done

Pain points
Relief is scattered (pills, ice packs, masks, earplugs, dark room), can't target the spot that hurts, no idea what helps; 17 of 36 fall behind at work

Functional
Relieve the headache where it hurts and learn what works

Emotional
Feel in control; rely less on pills

Social
Stay reliable and productive at work

Solution Customer Value Proposition (CVP)

Problem we solve
Headache relief comes in separate pieces, treats the whole head the same, and is never linked to tracking.

What customers want
One thing that gives relief at home and shows what triggers and helps their headaches.

Unique value
SpotOn: a cap with per-zone heat, cooling, and pressure plus eye and ear coverings, logged in one flow so the app learns which settings helped. Shareable charts for their doctor.

Vs. top competitors
- Gel caps (~$30): no zones or logging
- Trackers (Migraine Buddy): no relief device
- Prolivio: cooling only
- Cefaly ($390-$510): different category
- Pills: we complement them during rest

Customer Relationships

Message
"SpotOn: relief that's spot on." Comfort only, no medical claims.

Get
Online ads to busy professionals, doctor recommendations

Keep
One-tap logging; insights get more useful the more they log

Grow
Referrals, and doctors who see the share file

Relationship
Self-service app tied to the cap by a personal code; support and a return policy

Channels

How they want to be reached
Online, where busy professionals are: social, search, health content; through their doctor

Now
Prototype stage: customer survey (36 respondents), friends-and-family app test

Separate channels by segment?
Yes: chronic migraine via doctors and clinics; weekly headaches via direct-to-consumer online sales

Customer Segments

Ideal customer
Working professionals, 35+, upper middle class, headaches about weekly or more (incl. chronic migraine)

Description
Busy, screen-heavy days; want to rest and recover at home; comfortable with phone apps; will pay ~$200 for something that works

Secondary
Doctors who receive the user's share file

Do needs differ?
Chronic migraine: tracking and doctor reports. Weekly headaches: fast, targeted relief. Price-sensitive buyers: cheaper-cap fallback.

How we segment
By age, headache frequency, and income, plus the job to be done (relief vs. learning patterns)

Cost Structure

Most expensive / manage carefully
Hardware R&D, safety testing, manufacturing and tariffs. The cap is our only revenue, so unit cost decides the price.

Fixed
R&D, tooling, app development, regulatory and patent review, brand

Variable
Per cap: heating/cooling parts, battery, padding, assembly, packaging, shipping, returns, support, customer acquisition

With volume
Per-unit cost falls as tooling is spread over more caps and suppliers discount. App cost per user stays low (data kept on device, no servers). Unit cost TBD: needs supplier quotes.

Revenue Streams

Willingness to pay
Target buyers (adults 35+ with chronic-illness headaches): 10 of 19 would buy at $199 and 4 more said maybe. All 36 respondents: 11 yes, 13 maybe, 12 no; most no answers came from people under 35.

Pricing / how we make money
Premium one-time price of about $199 for the cap. The app is free but works only with a cap code. Fallback: a simpler, cheaper cap.

Products or services?
Both: we sell the cap (product), which includes the free app (service). The cap is the only revenue.

Projected revenue
Units sold x ~$199 (e.g., 1,000 caps = ~$199,000). Unit volume TBD after pricing tests and sizing the 35+ segment. Survey figures include illustrative data.
